* Username - Due to the character limit of 30 and the length of certain Local Network names there is no ideal username configuration that suits every Network. For those whose Network name cannot fully fit alongside **_crohnsandcolitisuk** as their username please feel free to amend your Username suggested above if feel the Network name could be better represented. However please don't lose the **_crohnsandcolitisuk** as keeping this will help your page appear when people are searching for your network or any network via the search term Crohn's & Colitis UK. Also having the network's name first will allow people to more easily distinguish individual Network pages when searching, seeing stories, and tagging pages in posts.

** Name - Due to the character limit of 30 and Crohn's & Colitis UK being in the Username there is no need for it to be in the name of the page. Not having it here also allows the page to be fully named. Something that is especially important for the longer named Networks and will help when people are searching for the network as the name appears in the search results.
